TYPE OF INJURY	CURRENT SABS	PROPOSED NEW SABS (Report of Expert CAT Panel)
Paraplegia/ Tetraplegia Severe Impairment of Ambulatory Mobility	(b) the amputation or other impairment causing the total and permanent loss of use of both arms or both legs; (c) the amputation or other impairment causing the total and permanent loss of use of both arms or both legs;	(a) paraplegia or tetraplegia that meets the following criteria i and ii, and either iii or iv: i. The Insured Person is currently participating in, or has completed a period of, in-patient spinal cord injury rehabilitation in a public rehabilitation hospital; and ii. The neurological recovery is such that the permanent ASIA Grade can be determined with reasonable medical certainty according to the American Spinal Injury Association Standards (Marino RJ et al. ASIA Neurological Standards Committee 2002. International standards for neurological classification of spinal cord injury. J Spinal Cord Med 2003; 26 (Suppl 1): S50-S56) and iii. The permanent ASIA Grade is A, B, or C or, iv. The permanent ASIA Grade is or will be D provided that the insured has a permanent inability to walk independently as defined by scores 0-3 on the Spinal Cord Independent Measure item 12 (indoor mobility, ability to walk <10 m) (Catz A, Itzkovich M, Tesio L, et al. A multicenter internal study on the spinal cord independence measure, version III: Rasch psychometric validation. Spinal Cord 2007; 45: 275-91) and/or requires urological surgical diversion, an implanted device, or intermittent or constant catheterization in order to manage the residual neuro-urological impairment. (b) severe impairment of ambulatory mobility, as determined in accordance with the following criteria: i. Trans-tibial or higher amputation of one limb, or Severe and permanent alteration of prior structure and function involving one or both lower limbs as a result of which: a. The Insured Person is currently participating in, or has completed a period of in-patient rehabilitation in a public rehabilitation facility, and b. It can be reasonably determined that the Insured Person has or will have a permanent inability to walk independently and instead requires at least bilateral ambulatory assistive devices [mobility impairment equivalent to that defined by scores 0-3 on the Spinal Cord Independence Measure item 12 (indoor mobility, ability to walk <10 m) (Ca
Blindness	(d) the total loss of vision in both eyes;	(c) Legal blindness in both eyes due to structural damage to the visual system. Non-organic visual loss (hysterical blindness) is excluded from this definition.

Traumatic Brain Injury in Adults

- (e) subject to subsection (1.4), brain impairment that, in respect of an accident, results in,
 - (i) a score of 9 or less on the Glasgow Coma Scale, as published in Jennett, B. and Teasdale, G., *Management of Head Injuries*, Contemporary Neurology Series, Volume 20, F.A. Davis Company, Philadelphia, 1981, according to a test administered within a reasonable period of time after the accident by a person trained for that purpose, or
 - (ii) a score of 2 (vegetative) or 3 (severe disability) on the Glasgow Outcome Scale, as published in Jennett, B. and Bond, M., Assessment of Outcome After Severe Brain Damage, Lancet i:480, 1975, according to a test administered more than six months after the accident by a person trained for that purpose;

*ELIMINATE GCS TEST

Two proposed definitions have been developed. The first would apply in the event that the Government accepts the Panel's recommendation to implement interim catastrophic impairment status. The second definition is to be used in the event that the interim status is not implemented.

- 4.1.6.1 If Interim Catastrophic Impairment Status is Approved
- 2. For the purposes of this Regulation, a catastrophic impairment caused by an accident is,

2d: Traumatic Brain Injury in Adults (18 years of age or older):

- i. An Insured is granted an interim catastrophic impairment status when accepted for admission to a program of inpatient neurological rehabilitation at a recognized neurological rehabilitation center (List of facilities to be published in a Superintendent Guideline).
- ii. Catastrophic impairment, based upon an evaluation that has been in accordance with published guidelines for a structured GOS-E assessment (Wilson JT, Pettigrew LE, Teasdale GM Structured interviews for the Glasgow Outcome Scale and the extended Glasgow Outcome Scale: Guidelines for their use. J Neurotrauma. 1998; 15: 573-585), to be:
 - a) Vegetative (VS) after 3 months or
 - b) Severe Disability Upper (SD+) or Severe Disability Lower (SD -) after 6 months, or Moderate Disability Lower (MD-) after one year due to documented brain impairment, provided that the determination has been preceded by a period of inpatient neurological rehabilitation in a recognized rehabilitation center (List of facilities to be published in a Superintendent Guideline).
- 4.1.6.2 If Interim Catastrophic Impairment Status is not Approved
- 2d: Traumatic Brain Injury in Adults (18 years of age or older):

The impairment is deemed to be catastrophic, when determined in accordance with published guidelines for a structured GOS-E assessment (Wilson JT, Pettigrew LE, Teasdale Structured interviews for the Glasgow Outcome Scale and the extended Glasgow Outcome Scale: Guidelines for their use. J Neurotrauma. 1998; 15: 573-585), is:

- i. Vegetative (VS) after 3 months, or
- ii. Severe Disability Upper (SD+) or Severe Disability Lower (SD-) after 6 months, or
- iii. Moderate Disability Lower (MD-) after 1 year, provided that the determination has been preceded by a period of inpatient neurological rehabilitation in a recognized rehabilitation center (List of facilities to be published in a Superintendent Guideline)

Other Physical Impairments (not covered by 2(a), 2(b), 2(c) or 2(d))	(f) subject to subsections (1.4), (2.1) and (3), an impairment or combination of impairments that, in accordance with the American Medical Association's <i>Guides to the Evaluation of Permanent Impairment</i> , 4th edition, 1993, results in 55 per cent or more impairment of the whole person; or (2.1) Clauses (1.2) (f) and (g) do not apply in respect of an insured person who sustains an impairment as a result of an accident that occurs after September 30, 2003 unless, (a) the insured person's health practitioner states in writing that the insured person's condition is unlikely to cease to be a catastrophic impairment; or (b) two years have elapsed since the	 A physical impairment or combination of physical impairments that, in accordance with the American Medical Association's Guides to the Evaluation of Permanent Impairment, 4th edition 1993, (GEPI-4), results in a physical impairment rating of 55 per cent whole person impairment (WPI). i. Unless covered by specific rating guidelines within relevant Sections of Chapters 3-13 of GEPI-4, all impairments relatable to non-psychiatric symptoms and syndromes (e.g. functional somatic syndromes, chronic pain syndromes, chronic fatigue syndromes, fibromyalgia syndrome, etc.) that arise from the accident are to be understood to have been incorporated into the weighting of the GEPI-4 physical impairment ratings set out in Chapters 3-13. ii. With the exception of traumatic brain injury impairments, mental and/or behavioural impairments are excluded from the rating of physical impairments. iii. Definition 2(e), including subsections i and ii, cannot be used for a determination of catastrophic impairment until two years after the accident, unless at least three months after the accident, there is a traumatic physical impairment rating of at least 55% WPI and there is no reasonable expectation of improvement to less than 55% WPI.
Psychiatric Impairment	accident. O. Reg. 281/03, s. 1 (7). (g) subject to subsections (1.4), (2.1) and (3), an impairment that, in accordance with the American Medical Association's <i>Guides to the Evaluation of Permanent Impairment</i> , 4th edition, 1993, results in a class 4 impairment (marked impairment) or class 5 impairment (extreme impairment) due to mental or behavioural disorder. O. Reg. 281/03, s. 1 (5). (2.1) Clauses (1.2) (f) and (g) do not apply in respect of an insured person who sustains an impairment as a result of an accident that occurs after September 30, 2003 unless, (a) the insured person's health practitioner states in writing that the insured person's condition is unlikely to cease to be a catastrophic	2(f) psychiatric impairment that meets the following criteria: i. The post-traumatic psychiatric impairment(s) must arise as a direct result of one or more of the following disorders, when diagnosed in accordance with DSM IV TR criteria: (a) Major Depressive Disorder, (b) Post Traumatic Stress Disorder, (c) a Psychotic Disorder, or (d) such other disorder(s) as may be published within a Superintendent Guideline. ii. Impairments due to pain are excluded other than with respect to the extent to which they prolong or contribute to the duration or severity of the psychiatric disorders which may be considered under Criterion (i). iii. Any impairment or impairments arising from traumatic brain injury must be evaluated using Section 2(d) or 2(e) rather than this Section. iv. Severe impairment(s) are consistent with a Global Assessment of Functioning (GAF) score of 40 or less, after exclusion of all physical and environmental limitations. v. For the purposes of determining whether the impairment is sufficiently severe as to be consistent to Criterion (iv) – a GAF score of 40 or less – at minimum there must be demonstrable and persuasive evidence that the impairment(s) very seriously compromise independence and psychosocial functioning, such that the Insured Person clearly requires substantial mental health care and support services. In determining the demonstrability and persuasiveness of the evidence, the following generally recognized indicia are relevant:

	impairment; or	a. Institutionalization;
		b. Repeated hospitalizations, where the goal and duration
	(b) two years have elapsed since the	are directly related to the provision of treatment of
	accident. O. Reg. 281/03, s. 1 (7).	severe psychiatric impairment;
		c. Appropriate interventions and/or psychopharmacological
		medications such as: ECT, mood stabilizer medication,
		neuroleptic medications and/or such other medications
		that are primarily indicated for the treatment of severe
		psychiatric disorders;
		d. Determination of loss of competence to manage
		finances and property, or Treatment Decisions, or for
		the care of dependents;
		e. Monitoring through scheduled in-person psychiatric
		follow-up reviews at a frequency equivalent to at least
		once per month;
		f. Regular and frequent supervision and direction by
		community-based mental health services, using
		community funded mental health professionals to
		ensure proper hygiene, nutrition, compliance with
		prescribed medication and/or other forms of psychiatric
		therapeutic interventions, and safety for self or others.
		therapeutic interventions, and salety for sen or others.
Traumatic Brain		3. Paediatric Traumatic Brain Injury (prior to age 18)
	(1.3) Subsection (1.4) applies if an	5. Faediatile Traditiatic Brain Injury (prior to age 10)
Injury in Children	insured person is under the age of 16	i. A child who sustains a traumatic brain injury is automatically deemed to have
	years at the time of the accident and	sustained a catastrophic impairment automatically provided that either one of the
	none of the Glasgow Coma Scale,	following criteria (a or b) is met on the basis of traumatic brain injury sustained in the
	the Glasgow Outcome Scale or the	accident in question:
	American Medical Association's	a. In-patient admission to a Level I trauma centre with positive findings on
	Guides to the Evaluation of	CT/MRI scan indicating intracranial pathology that is the result of the accident,
	Permanent Impairment, 4th edition,	including but not limited to incracranial contusions or haemorrhages, diffuse
	1993, referred to in clause (1.2) (e),	
	(f) or (g) can be applied by reason of	axonal injury, cerebral edema, midline shift, or pneumocephaly; or
	the age of the insured person.	b. Inpatient admission to a publically funded rehabilitation facility (i.e. an Ontario
	O. Reg. 281/03, s. 1 (5).	Association of Children Rehabilitation Facility or equivalent) for a program of
		brain injury rehabilitation or Ontario Association of Children Rehab Facilities);
	(1.4) For the purposes of clauses	
	(1.2) (e), (f) and (g), an impairment	Desilitation estastinable immediate at the basis of the result basis (c) and a few
	sustained in an accident by an	Paediatric catastrophic impairment on the basis of traumatic brain injury is any one of the
	insured person described in	following criteria:
	subsection (1.3) that can reasonably	ii. At any time after the first 3 months, the child's level of neurological function does not
	be believed to be a catastrophic	exceed the KOSCHI Category of Vegetative (Crouchman M et al., A practical outcome
	impairment shall be deemed to be the	scale for paediatric head injury. Archives of disease in Childhood. 2001; 84:1204).
	impairment that is most analogous to	The child is breathing spontaneously and may have sleep/wake cycles. He may have
	the impairment referred to in clause	non-purposeful or reflex movements of limbs or eyes. There is no evidence of ability to
	(1.2) (e), (f) or (g), after taking into	communicate verbally or non-verbally or to respond to commands.

	consideration the developmental implications of the impairment. O. Reg. 281/03, s. 1 (5).	iii. At any time after the first 6 months, the child's level of function does not exceed the KOSCHI Category of severe (Crouchman M et al., A practical outcome scale for paediatric head injury. Archives of Disease in Childhood. 2001, 84:1204). (1) The child is at least intermittently able to move part of the body/eyes to command or make purposeful spontaneous movements; for example, a confused child pulling at nasogastric tube, lashing out at caregivers, or rolling over in bed. (2) May be fully conscious and able to communicate but not yet able to carry out any self care activities such as feeding. (3) Severe Impairment implies a continuing high level of dependency, but the child can assist in daily activities; for example, can feed self or walk with assistance or help to place items of clothing. (4) Such a child is fully conscious but may still have a degree of post-traumatic amnesia. iv. At any time after the first 9 months, the child's level of function remains seriously altered such that the child is for the most part not age appropriately independent and requires supervision/actual help for physical, cognitive and/or behavioural impairments for the majority of his/her waking day.
Most Analogous Impairment re AMA Guides	(3) For the purpose of clauses (1.1) (f) and (g) and (1.2) (f) and (g), an impairment that is sustained by an insured person but is not listed in the American Medical Association's <i>Guides to the Evaluation of Permanent Impairment</i> , 4th edition, 1993 shall be deemed to be the impairment that is listed in that document and that is most analogous to the impairment sustained by the insured person. O. Reg. 403/96, s. 2 (3); O. Reg. 281/03, s. 1 (8).	The Panel unanimously agreed that this definition was to be eliminated because of the redundancy with 2(e).
